01. PROJECT OVERVIEW

This project analyzes coffee shop sales data to identify key trends in revenue, product performance, and customer buying patterns.

Using tools like SQL, Databricks, and Excel, the data was processed and transformed into meaningful insights.

The project aims to identify high-performing products, peak sales periods, and differences in store performance. These insights are then used to provide practical recommendations that can help improve revenue, optimize operations, and enhance customer satisfaction.

The goal is to support better business decisions and improve overall performance.

02. OBJECTIVES

1

Identify top-performing products and categories

2

Analyze total revenue and sales trends

3

Determine peak sales times and customer patterns

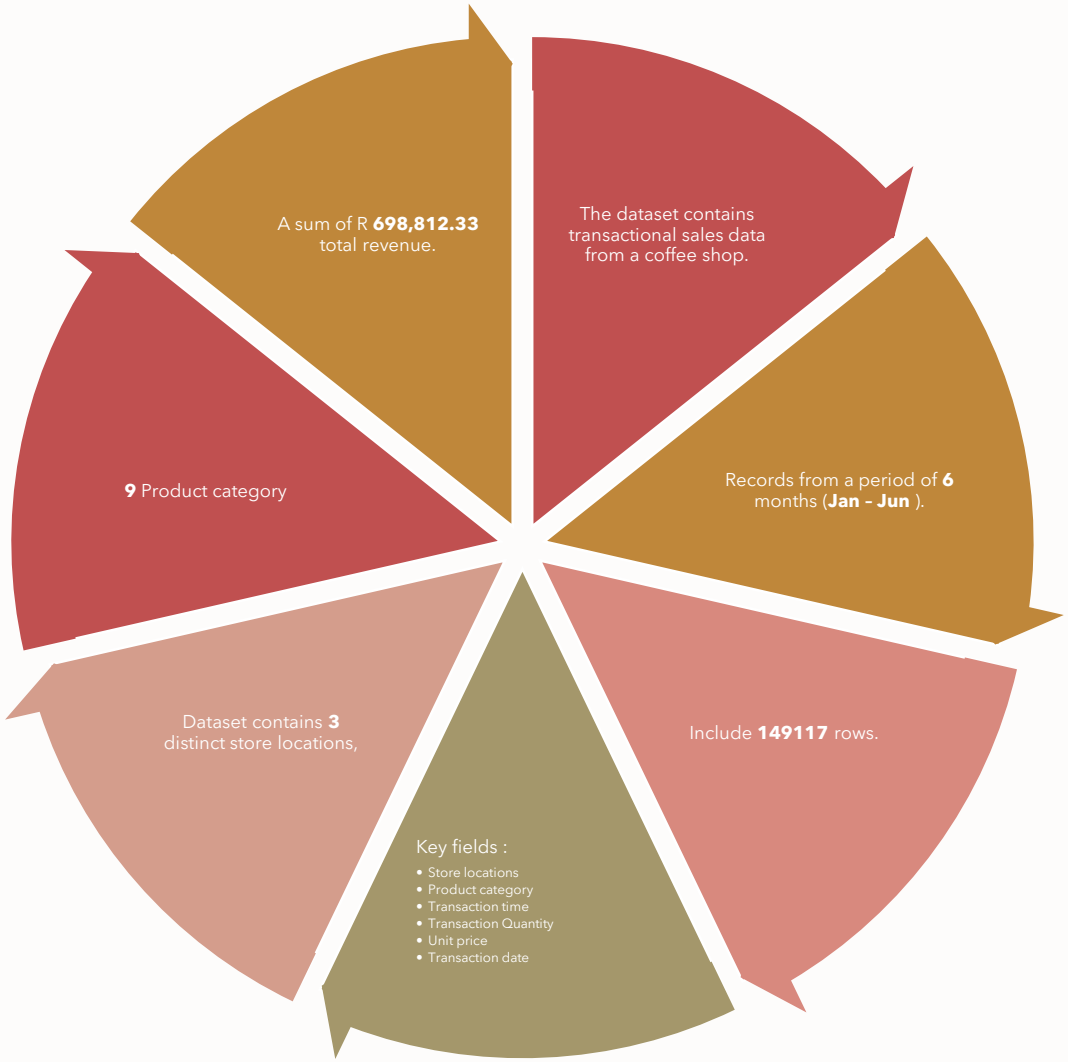
4

Compare performance across store locations

5

Provide data-driven recommendations to improve business performance

03. DATASET OVERVIEW



04. METHODOLOGY

DATA COLLECTED FROM SALES TRANSACTIONS

DATA CLEANED AND FORMATTED FOR ACCURACY

CREATED CALCULATED FIELDS (E.G., TOTAL REVENUE, DEAL DATE)

ANALYZED DATA USING SQL ON DATABRICKS

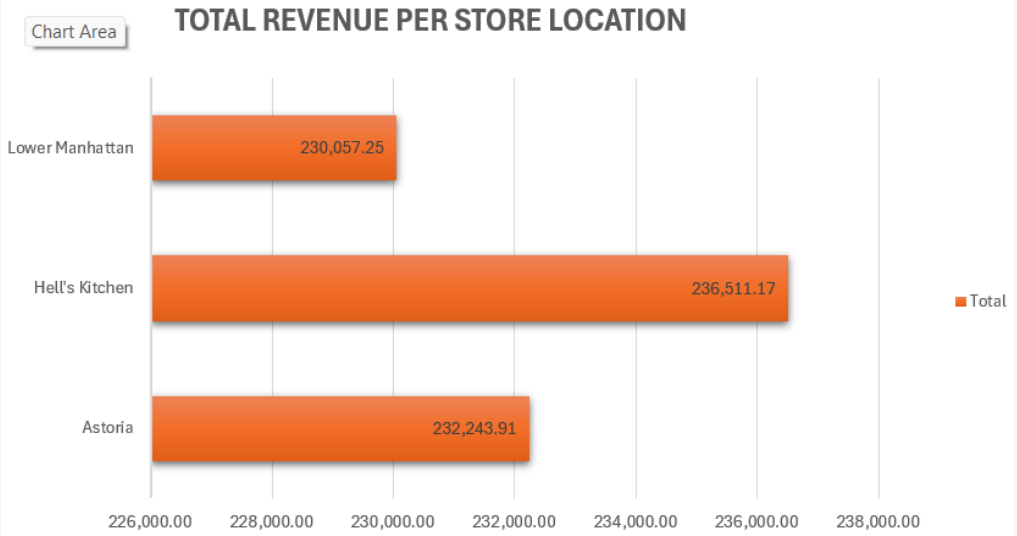
BUILT VISUALIZATIONS USING EXCEL

05. DATA PROCESSING

- Cleaned and formatted raw data
- Fixed data types (prices, dates, quantities)
- Created calculated field: Total Sales = Unit Price × Quantity
- Extracted time features (hour, day)
- Grouped data into time buckets (morning, afternoon, evening)

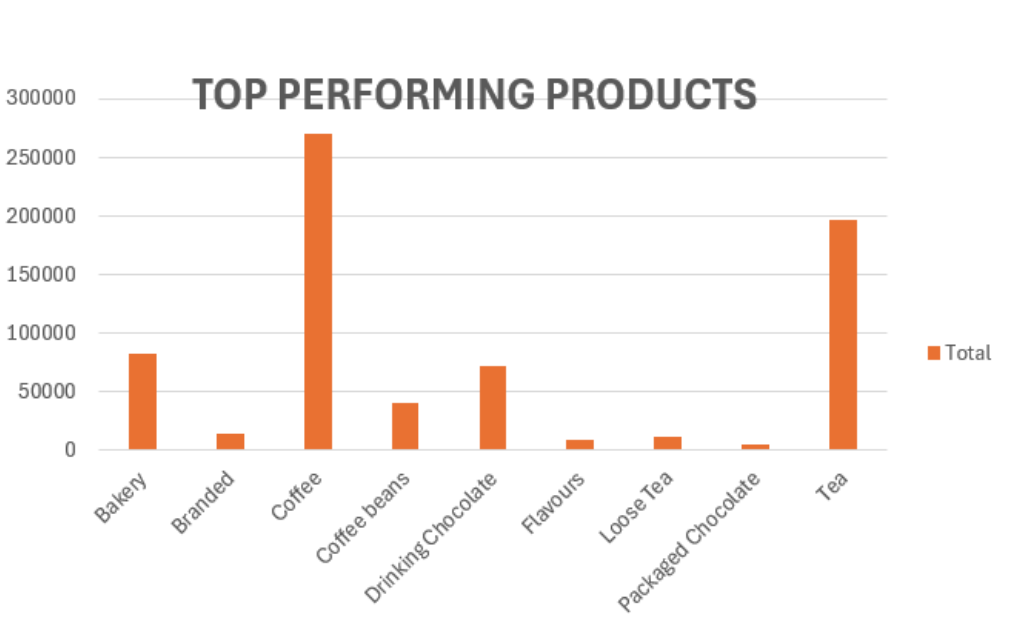
06. REVENUE ANALYSIS

- Hell's Kitchen is generating the most revenue, followed by Astoria and lastly Lower Manhattan.
- Total revenue from the 3 distinct store is R 698,812.33



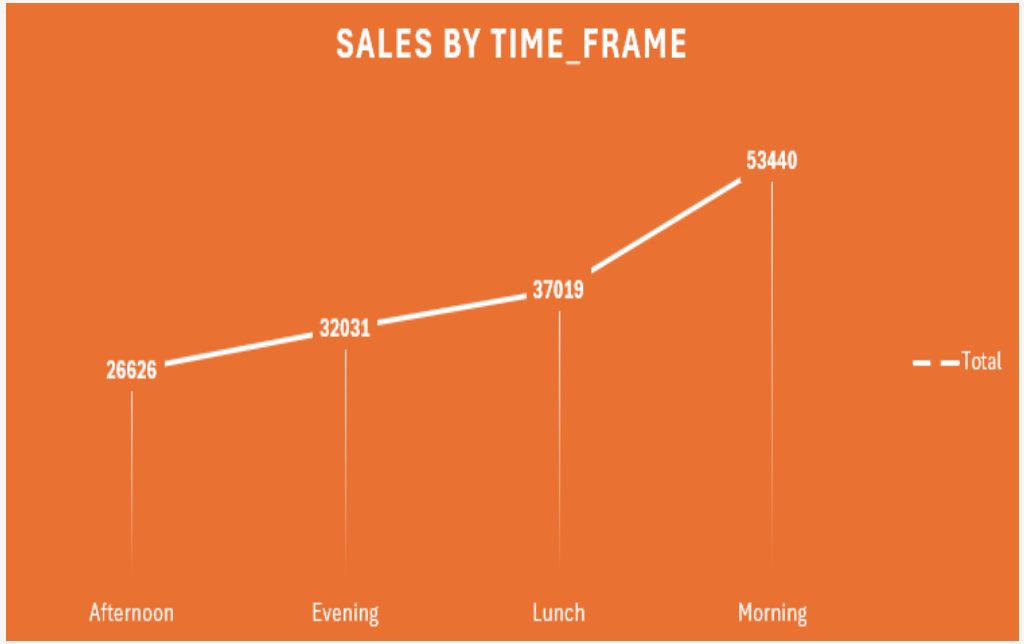
07. PRODUCT PERFORMANCE

- Coffee is performing better than all the other 8 product we have in our shops, followed by Tea and Bakery.
- Packaged Chocolate is the least performing in our distinct stores followed by Flavours and Loose Tea.
- Average performing products are Drinking Chocolate, Coffee Beans and Branded.



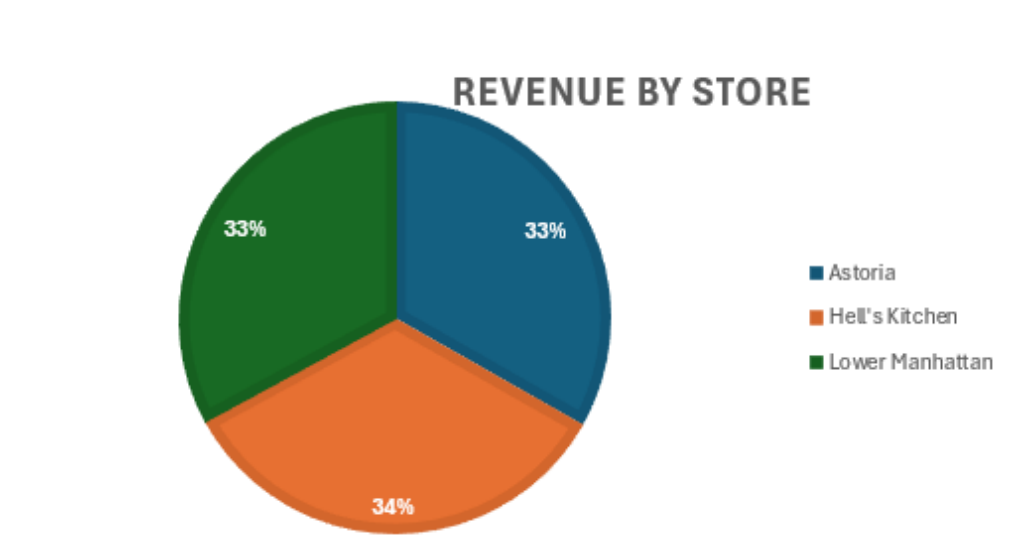
08. TIME-BASED ANALYSIS

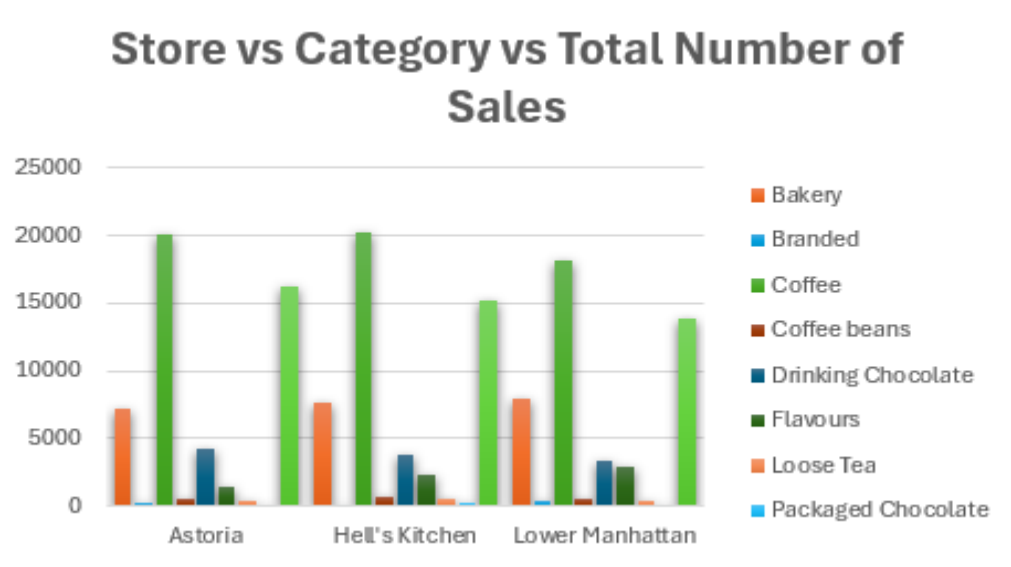
- Most sales are made in the morning as it presents in the line graph,
- Second best performing time of the day is during Lunch time,
- Average sales are between Lunch time and Evening
- Afternoons the sales drops



09. STORE PERFORMANCE

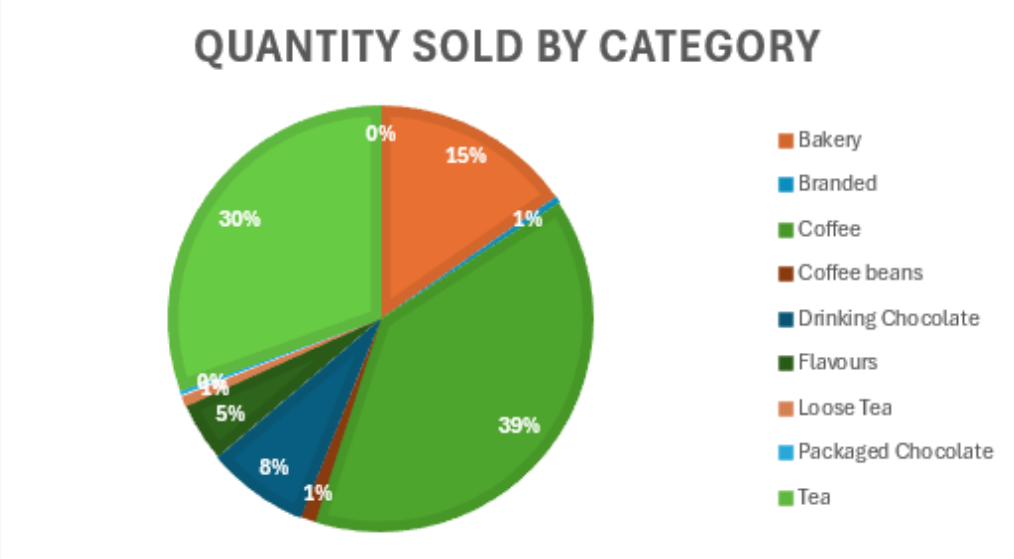
- Hell's Kitchen coffee shop perform better than the other stores as it contributes 34% of revenue
- Both Astoria and Lower Manhattan contributes 33% of revenue.
- The last graph shows the performance of all 3 distinct stores per product category.





10. KEY INSIGHT

- Coffee, Tea & bakery contribute the majority of revenue
- Morning hours generate the highest sales
- Hell's kitchen outperform Astoria & Lower Manhattan, as a result more attention should be given to Lower Manhattan as it is the only store with the list sales.
- Run promotions on low performing products on the Coffee Shop.



11. RECOMMENDATIONS

- Increase stock for for Coffee, Tea & Bakery since they are in demand
- Optimize staffing during peak hours
- Support low-performing stores with strategy changes
- Promotions to improve sales,
    1. Run buy one get one free on poor performing products
    2. Combo deal on off-peak
    3. Peak hours → Morning specials
    4. Slow hours → Happy hour deals
    5. Top products → Combo deals
    6. Low products → Discounts

12. FUTURE IMPROVEMENTS

01

Automate data processing and reporting using Databricks

02

Develop interactive dashboards (Power BI / Tableau)

03

Implement real-time sales tracking

04

Apply predictive analytics for demand forecasting

05

Expand analysis to include customer behavior and segmentation

13. CONCLUSION

In conclusion, this analysis has shown that by focusing on key products, optimizing peak-hour operations, and improving underperforming areas, the business can increase revenue and operate more efficiently. Data-driven decision-making will be essential for sustainable growth
